

Business Sales Performance Analytics Report

Project Overview

This project analyzes business sales data to identify revenue trends, top-selling products, high-value categories, regional performance, and profitability insights.

Tools Used

Python, Pandas, NumPy, Matplotlib, Seaborn, Power BI, and Excel were used for analysis, cleaning, visualization, and dashboard creation.

Data Cleaning Process

Missing values were removed, duplicate records were deleted, date columns were converted into datetime format, outliers were handled using IQR methods, and text columns were standardized.

Dashboard Insights

The dashboard includes KPI cards, category-wise sales analysis, product analysis, regional sales charts, and regional profit analysis.

KPI Insights

Total Sales: 3M, Total Profit: 441.61K, Total Orders: 6K.

Category Insights

Office Supplies contributed the highest sales share, followed closely by Furniture and Technology categories.

Product Insights

Bookcase, Paper, Pen, Monitor, and Chair were among the top-performing products.

Regional Insights

West and East regions generated the highest revenue, while North region showed comparatively lower performance.

Profitability Insights

West region generated the highest profit. Excessive discounts negatively impacted profitability.

Business Recommendations

Increase focus on high-performing regions and products, optimize discounts, improve inventory management, and strengthen marketing strategies.

Conclusion

The project successfully demonstrated business analytics, dashboard development, KPI analysis, and insight generation using Python and Power BI.
